

PRODUCT DESCRIPTION

Color Changing Indoor Outdoor Accent Lights, With a Taste for Water!

Each Set has 6 Color Changing LED lights that slowly cycle through thousands of subtle hues. The Led Lights are very bright and combined with my Patented Illumination System create a Magical Colorful Beautiful display and should last up to 60,000hrs. The LEDs have a 5 year Guarantee but you may consider them heirlooms if expected life is reached.

A Sophisticated Pushbutton Color Control Module is at the base of the bendable support. A simple touch when you see the color you like, selects that color locking the Microprocessor memory circuit so the lights will remember the chosen color.

The lights are good for all seasons, or be patriotic with red white and blue, or Green for St. Patrick's Day, red for Valentines, Orange or an eerie Violet for Halloween, Multi-colors for Easter, Red and Green for Christmas, or all Blue for a mood change.

Using the 2 piece forked support shaft, the SprinkLites can be extended up to 48" of placed close to the ground.

SprinkLites™ could be solar or battery powered but I have chosen to use a highly efficient Very Low Voltage 4.5VDC 300ma power source that plugs into a 110 VAC outlet. The transformer is UL approved, outdoor rated and all the connectors are watertight. The lights are on regardless of the amount of sunlight. And there are plans for a Solar Power Station to run a set of six lights and a 12VAC adapter (for existing 12V systems) is in final testing and should soon be available.

From the transformer we use a 15 ft line with a Dusk to Dawn Photo Cell for Automatic Operation. An extension line connects to the light sensor and this cord has 6 sealable connector receptacles plus a receptacle for adding additional systems in daisy chain fashion.

A lighter gauge 3' control wire connects from the tap line to the color controller. 6' and 15' control lines are available.

There are 6 pieces of clear ¼" tubing is for the water system the tubing is self threading and any available micro nozzles can be used 10-32 or even the 10-24 like the mister nozzles. 2 of the included nozzles are beaks for the humming bird and emit a small stream, the other 4 nozzles spray perpendicular to the axis of the tube. And can be pointed in any direction, up or down. The tips can be clipped and the lights can be used for spitters or accents for fountains and water features.

To complete the water conservation system a pre-assembled ¼" symmetrical micro irrigation system is included, it has a ¾" adapter and can be connected to a faucet or garden hose.

For more detailed information and photography please go to our web site www.sprinklites.com.

SprinkLites™

The system sounds Complicated, but is really 2 simple sets:

1) ELECTRICAL:

- a. A wire connects to the controller.
- b. The Controller mounts to a stake,
- c. The other end of the wire connects to a TAP line
- d. That line is plugged into a 120vac-4.5vdc Transformer.

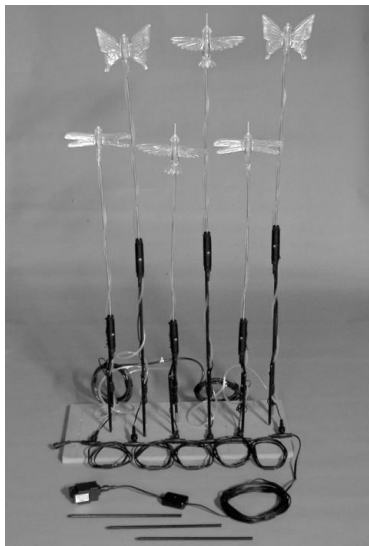

2) PLUMBING:

- a. A clear tube goes through the clear sculpture,
- b. A nozzle is attached at the nose,
- c. The sculpture is pressed onto the LED insert,
- d. The other end of the clear tube attaches to the assembled ¼" water distribution line,

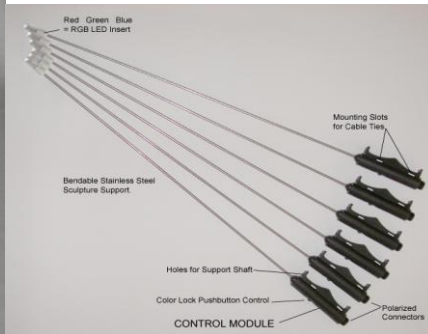

The steps are repeated 5 more times, once for each light (about 30 min) and then

The water line is connected to a Hose or Faucet.

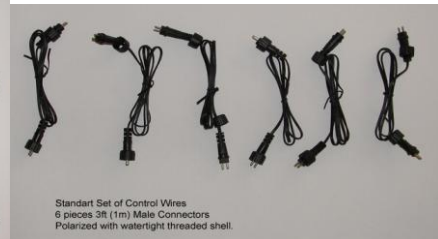

YOU are DONE!

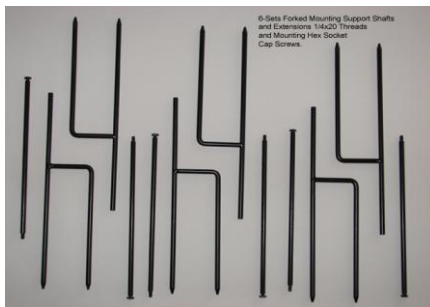

Complete System

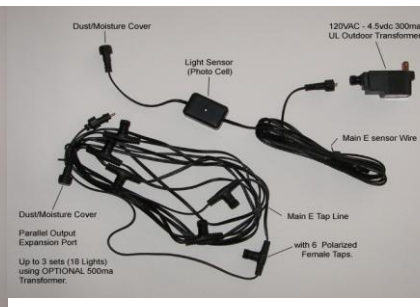

LED & Control Module 6pcs

Control Wires 6 pcs

2 Piece Support Stakes

6 Tap Line - Main Line - Xfmr

Pre Assembled ¼" Water Line
